

GuardTek m-Post

The complete mobile application to better manage your officers and increase productivity that's completely customized for your organization. From interactive guard tours to comprehensive real-time incident reporting, m-Post modernizes security services.

-  **Incident Reporting**
-  **Event & Activity Reporting**
-  **Guard Tours & Patrols**
-  **Time and Attendance**
-  **Geolocation & Dispatch**
-  **Post Order Management**

Incident Reporting

Customizable incident alerting software streamlines the entire process and enforces consistency using messages that include multimedia and text.

- Create customized forms per site, and per incident type and standardize processes
- Capture photos and videos to provide a more detailed report
- Real-time report engine keeps online history and eliminates need for paper reports

Event & Activity Reporting

Eliminate paper reports and centralize information online by capturing security officer activities through smartphones, tablets, or computers.

- View activities by officer, activity type, and more
- Combine m-Post with Post, mobile and PC access options to record activities
- Centralized access for stakeholders builds trust and credibility

Guard Tours & Patrols

Officers scan RFID checkpoints at strategic site locations using mobile technology providing real-time updates to the central system.

- Validate tours in real-time using survivable tour tags
- Deliver detailed and accurate tour logs
- Provide peace of mind to stakeholders

Time and Attendance

Easily capture time and attendance data for accurate payroll processing, labor law compliance, and insight into workforce productivity.

- Track time for officers by site and shift to maximize efficiencies
- Increase accuracy and improve compliance with overtime laws
- Real-time alerts enable immediate supervisory response to coverage issues

Geolocation and Officer Dispatch

Locate officers online at any time and dispatch appropriately for an alarm response or medical emergency based on proximity and availability.

- GPS identifies officer presence in real-time
- View status, availability, proximity and estimated drive times to incidents
- Document task acknowledgements, progress, and completion status in real-time

Post Order Management

Online post order management allows management to distribute officer instructions seamlessly in real-time and document compliance.

- Deliver updates and notifications in real-time
- Customize Orders and Passdowns by post, client or organization
- Document acknowledgment by individual officers, build trust with stakeholders
